

Ali Hassan S.P.

Software Engineer / C++ · Unreal Engine ·
C#/Unity · .NET/Blazor

 [alihassan-shahid](#)

 ali.shahid.1212@proton.me

 Barcelona, Spain

Developed C++ games and custom engines from scratch using SDL (2D) and OpenGL (3D). Experienced with C#/Unity across AI behaviors and AR mobile gaming, with a final-year project completed in Unreal Engine. Additional experience building web and mobile apps with Dart and Flutter, and web/backend projects using PHP, MySQL, .NET, and Blazor. Available for full-time, junior, and freelance opportunities. Full portfolio: <https://feroxx07.github.io/> 

Education

Video Game Design and Development at the CITM-UPC

Bachelor's Degree
2019 – 2024

Hard Skills

C++ | C#/Unity | Unreal Engine
SDL | OpenGL | Custom Engines
Dart/Flutter/Firebase
PHP | MySQL | .NET | Blazor
Git/GitHub | Trello | Visual Studio

Soft Skills

Problem-solving & proactivity
Code & project organization
Teamwork & collaboration
Self-directed learning

English – Spanish – Catalan

Experience & Projects

Audio Spectrum Data in Unity

QA Tester.

2025

- Developed as part of a colleague's final degree project (TFG)
- It is designed to display visualization of the audio spectrum frequencies and gives tools to bind to custom events any part of the data.

Diegetic Inventory System in Unreal Engine 5

github.com/FeroXx07/InventorySystemProj
Tools & Gameplay Programmer.

2025

- A modular and extensible inventory system for Unreal Engine.
- It is designed to be diegetic (existing inside the game world) and flexible (any actor can have an inventory).
- This project was developed as part of a final degree project (TFG).

Advanced Deferred Renderer Engine

github.com/FeroXx07/Advanced-3D-Renderer
Graphics & Tool Programmer.

February 2024 - June 2024

- A render engine featuring deferred rendering with Phong lighting, support for normal mapping and advanced parallax occlusion mapping. It includes Screen Space Ambient Occlusion for enhanced depth, along with an integrated resource visualizer and manipulator for intuitive asset inspection and debugging.

Priest of Firepower

feroxx07.github.io/priest_of_firepower.html

Network & Gameplay Programmer.

September 2023 - January 2024

- Implemented a network structure from scratch in Unity, without using the official NetCode API. Contributions in object replication, serialization, network object and network behavior.
- Gameplay: networking of enemies and UI.

Cupra gamified car; Project Winner 2023-24 edition

feroxx07.github.io/cupra_gamified_car.html

UI Designer & Unity/C# Scripting

September 2023 - January 2024

- Design and implementation of the User Interface in different parts of the User Experience flow.

Heatmap Analytics

feroxx07.github.io/heatmap.html

Tool Programmer.

December 2023 - January 2024

- Implemented data collection through C# scripts, PHP & MySQL.
- Integrated in-editor data visualization tools like heatmaps and path visualizer.

Guardians of the Galaxy: Battle for the Universe

feroxx07.github.io/gotg.html

Gameplay and Tool Programmer.

March 2023 - June 2023

- Designed and implemented AI behaviors for melee and ranged enemies.
- Designed and implemented a tool for designers to balance enemy stats and game loop features.

Wiwa Engine

feroxx07.github.io/wiwa_engine.html

Engine Programmer

March 2023 - June 2023

- Integrated "Bullet Physics" library and implemented a physics module into our custom engine.
- Integrated "Recast and Detour" library and created a Unity-like AI module.

Finger Smash (AR mobile game)

feroxx07.github.io/finger_smash.html

Unity/C# Scripting

March 2023 - June 2023

- Implementation of the game mechanics, tower and enemies' behaviors.

Wasabi Warriors

feroxx07.github.io/wasabi_warriors.html

UI Programmer

February 2021 - June 2021

- Contributed on the menus, in game inventory, HUD, and dialog display.
